VISION THERAPY

**STRONGER VISUAL SKILLS.
BETTER EVERY DAY.**

Vision therapy is a personalized program that improves how the **eyes** and **brain** work together.

It helps develop visual skills needed for reading, learning, sports, work, and everyday activities.

WHAT DOES VISION THERAPY HELP WITH?

Vision therapy can improve:

Eye tracking
and focusing

Eye teaming
and
coordination

Hand-eye
coordination

Visual
processing
and perception

Reading and
learning skills

Sports
performance
and reaction time

Recovery after
concussion or
brain injury

VISION IS MORE THAN SEEING CLEARLY

If you're struggling with focus, reading, or schoolwork, it may not be attention alone—your visual system could be contributing to the problem.

♥ Vision therapy can
help address many of
these visual challenges.

VISION PROBLEMS OFTEN MISTAKEN FOR ADHD

Many symptoms associated with ADHD may actually be related to an underlying vision problem.

COMMON SIGNS INCLUDE:

-  Losing place while reading
-  Difficulty concentrating on schoolwork
-  Avoiding reading or close-up tasks
-  Frequent headaches or eye strain
-  Words appearing to move or blur on the page
-  Short attention span during visual tasks
-  Fatigue during reading or homework
-  Poor eye tracking or focusing skills

**EVERY CHILD SEES THE WORLD DIFFERENTLY.
WE HELP THEM SEE THEIR BEST.**

When vision and brain work together, children can learn better, feel more confident, and reach their full potential in school and in life.

A comprehensive approach. Personalized care. Lasting results.

BETTER VISION. BETTER FUTURE.
